

THE QUANT CASE

Programmable Alpha & Beta on Solar.

A real-time rating on every solar panel · every 30 seconds, every day.

Every solar asset already has an alpha and a beta. Today both are guessed, inferred from weather models and hail maps. Genesis data replaces the guess with a measurement, at the panel, in hardware. Priced risk follows measurement.

Verified data lifts the financeable floor — most where it is scarcest (the P99 tail)

The stricter the confidence a lender demands, the more verified Genesis data is worth: +9 pts at P90, +16 pts at P99.

VERIFIED DATA LIFTS THE FINANCEABLE FLOOR · +9 PTS AT P90 · +16 PTS AT THE P99 TAIL

β BETA ↓

Compress the P50→P90→P99 band the market prices as risk. Lower variance is lower risk premium: more debt, cheaper equity, lower premiums. The real **\$\$\$cost of capital\$\$\$** move.

α ALPHA ↑

Per-panel observability makes output **recoverable** and loss **improvable** (did the stow fire at 70°? is a module degrading pre-failure?). Measured excess return the model leaves on the table.

1.0 THE TWO GREEKS

1.1 · BETA (RISK)

The variance the market prices as risk.

Solar is underwritten off priors (NOAA hail contours, TMY weather), not the asset’s measured reality, so the P50 you sell and the P90/P99 you are financed against sit a wide, expensive band apart. Verified, panel-level data is the Bayesian update: it **compresses the band** and lifts the financeable floor (+9 at P90, +16 at P99), lowering the **cost of capital** and insurance exposure.

1.2 · ALPHA (RETURN)

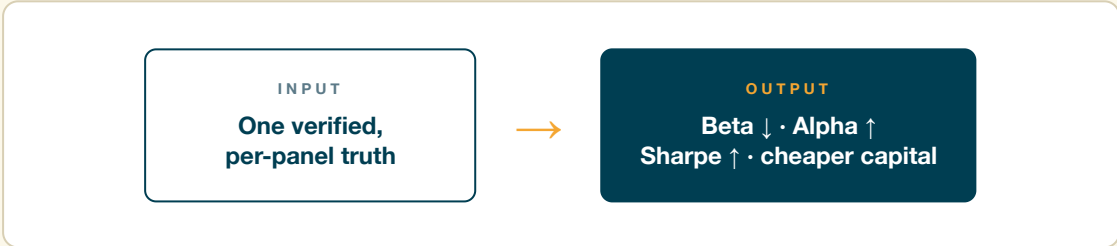

The excess return the model can’t see.

The 9–13% of output lost to undiagnosed faults, soiling and mismatch is invisible to today’s sensing. Per-panel truth makes it **observable and recoverable**, and makes loss improvable per asset: measured alpha, not a modelled promise.

2.0 THESIS

Lower beta and higher alpha on the same asset is a **higher Sharpe ratio** on a solar panel.

FIG. 1

3.0 THE LINE

“We turn P90/P99 from a model assumption into a **measured, per-panel fact** — and priced risk follows measurement.”
